

**IN THE ABSTRACT**

Page 9, lines 2-10 have been amended as follows:

A combinative locker includes four peripheral panels, a rear panel and a front panel. The peripheral panels are connected with one another. Each of the peripheral panels includes an internal side, a rear edge, a front edge, a first reinforcement device formed on the internal side at the rear edge and a second reinforcement device formed on the internal side at the front edge. The rear panel includes a plurality of edges each connected with the rear edge of one of the peripheral panels. The front panel includes a plurality of edges, one of which is pivotally connected with the front edge of one of the peripheral panels.
